Skills

- Front-end web development with HTML, CSS, and JavaScript
- User interface (UI) and design system management with Figma
- Scrum and project management with Trello
- Version control with git
- Presentation and product demonstration
- Leadership skills
- Troubleshooting and testing skills using Chrome DevTools

Software Development Experience

Competa Millman, Developer
AUGUST 2019 - AUGUST 2021, NAIROBI

I was in charge of front-end web development, crafting user interfaces using HTML, CSS, and JavaScript. I led a team to rebuild a user interface for a client that allowed them to dynamically generate SQL reports, which increased user engagement on their platform three-fold.

I was also responsible for creating and maintaining design systems for different projects using Figma. I focused on ensuring that the components built met accessibility guidelines while remaining beautiful.

Education

JKUAT, BSc. Mathematics and Computer Science
SEPTEMBER 2014 - NOVEMBER 2018, KIAMBU

Relevant Coursework: Object-Oriented Programming, Internet Application Programming, Database Systems, Computer Organization.

Volunteer Experience

I volunteer up to 10 hours a week for Imara TV. Imara TV is an online platform that crowdsources youth-generated video content on human development and sexuality. I am responsible for developing and maintaining their website and content creator platform.

I also launched the first-ever Hult Prize student competition at my university. The Hult Prize is a 1M USD social entrepreneurship challenge that aims at solving the world's most pressing problems. During my leadership at the Hult Prize chapter at my university, I engaged 250 students to develop business ideas and learn how to pitch. The competition gained coverage in the Business Daily Africa newspaper.
